Application US/09069023A

Patent No. 6348573

GENERAL INFORMATION:
APPLICANT: Nunez, Gabriel
APPLICANT: Inohara, Nachiro
APPLICANT: Nonez, Takeyoshi
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERENCE: UM-03333
CURRENT APPLICATION NUBER: US/09/069,023A
CURRENT FILING DATE: 1998-04-27
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 33,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  428
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                      Sequence 1, Application US/09723450

Patent No. 6576751

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION: Compositions For And Methods Of Making The Same

TITLE OF INVENTION: Compositions For And Methods Of Making The Same

FILLE REFERENCE: TUJ445

CURRENT APPLICATION NUMBER: US/09/723,450

CURRENT FILING DATE: 2000-11-28

PRIOR APPLICATION NUMBER: 09/276,993

PRIOR APPLICATION NUMBER: 09/276,993

PRIOR APPLICATION NUMBER: 09/276,993

PRIOR APPLICATION NUMBER: 09/276,993

PRIOR FILING DATE: 1997-05-20

NUMBER OF SEQ ID NOS: 17

SOFTWARE: Patentin version 3.0

LENGTH: 1750
                                                                                                                                                                                                                                                        1869 ATTATGTCTGGCTGCAGCACACTCTGAGAAAGAAACTTATCCTCTCCTACATAA 1924

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/09804471A
Patent No. 6479269
GENERAL INFORMATION:
FOR THE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL001164
CURRENT APPLICATION NUMBER: US/09/804,471A
CURRENT FILING DATE: 2001-03-13
                                                                                                                                                                                                                                                                          9873
                                                                                                                                                                                                                                                                                                                                                                                                     2047
                                                                                                                                                                                                                                                                                                                                                                                                                                          9753
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2107

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
